

Marabu-ColorManager V.2.4

Formula Update 1/2022

January
2022

Dear User,

To keep your Marabu-ColorManager 2 (MCM 2) software up-to-date we offer new formulas as well as updates which can be imported into the MCM 2 software. To use this formula update, the Marabu-ColorManager 2 version 2.4 must be already installed on your computer. This formula update is not suitable to update the former versions 2.2 or 2.3 of the Marabu-ColorManager. Before starting the update, we recommend making a backup copy of your existing database, especially if you have saved your own formulas. The database **MarabuDatabaseAccess.mdb** can be found at **C:\Marabu\MCM24\Databases**.

To update your personal Marabu-ColorManager V.2.4 please follow these steps:

Download the file "Update_1_2022.zip" from the Marabu Homepage and all ink series files you need. Store and unzip all files into any folder of your computer.

1. Start the Marabu-ColorManager Version 2.4.
2. Click on <Import/Export>, <Import>, <Update>, <Select Update-File>.
3. Select the file „Update_1_2022.SER“ and <Open> it.
„Would you like to import Updates from file Update_1_2022.Ser?“ Confirm with „Yes“.
„Would you also like to import prices of basic shades and auxiliaries?“ Answer with „No“.
Confirm the message „Import successfully completed“ with „OK“.
4. Close the Marabu-ColorManager and restart the program.
5. Click in the menu of the Marabu-ColorManager 2 <Import/Export>, <Import>, <Import formula> and <Continue>.
6. Select one of the before unzipped ink series files "***.frm**" and click <Open>.
7. After a few seconds all new formulas will be displayed in a table. Select all formulas for the Import by clicking any point in the table and press <CTRL-A>. Click <Continue>.
"Start now Import of selected formulas" answer with "Yes".
The process is finished if the message „Import completed“ is displayed.

Repeat step 5 - 7 for all ink series for which formulas are to be imported.

In the event of any queries, please contact the Marabu Colorimetry:
